

**Frontend Assessment – Internship Role****Task 1: Build a Simple Flask Web Application****Scope:**

XYZ Company is looking to develop a simple Flask web application to enhance user engagement and provide a personalized experience. The user stories are created by a junior product manager.

**User Story:**

1. Homepage Design and Welcome Message:
  - Design a visually appealing homepage layout that aligns with the overall branding of XYZ Company.
  - Display a prominent and welcoming message on the homepage, inviting users to explore the application.
  - Include appropriate visuals, such as images or icons, to enhance the visual appeal of the homepage.
2. User Input Form:
  - Create a form where users can enter their name.
  - Include validation on the form to ensure that the name field is not left empty or contains any invalid characters.
  - Implement client-side validation to provide immediate feedback on any input errors or missing fields.
  - Customize the form's design to maintain consistency with the overall application theme.
3. Greeting Page:
  - Develop a separate page that displays a personalized greeting message using the name entered by the user.
  - Design the greeting page to be visually appealing and user-friendly.

**You are required to:**

To complete the task provided in user stories above with a good visualization and UI experience. It's recommended to provide demo link or Github project as response to this task through Email.

**Expected time to complete:** Between 2-4 hours.

**Evaluation:**

- Functionality
- Technical implementation
- User experience and design
- Code quality and structure
